

# 2025 The 3<sup>rd</sup> International Conference on Natural Products and Chronic Diseases Jakarta, Indonesia, December 4-5, 2025

<https://iconference-ncd.unas.ac.id>

In an era marked by the rising global burden of chronic diseases, the search for sustainable, effective, and accessible treatment modalities has never been more urgent. The 3<sup>rd</sup> International Conference on Natural Products and Chronic Diseases 2025 emerged at this critical juncture, bringing together the world's foremost researchers, educators, traditional medicine practitioners, and industry innovators under the theme "Natural Products for Quality of Life: Advancing Global Health and Sustainability."

This landmark gathering built upon the success of previous conferences, expanding the dialogue between modern scientific methodologies and ancient healing traditions. As chronic conditions continue to challenge healthcare systems worldwide, natural products offer promising pathways for treatment innovation that harmonize with both human physiology and environmental sustainability.

The conference showcased groundbreaking research in phytochemicals, marine compounds, microbial metabolites, and traditional medicine formulations that demonstrate efficacy in managing conditions such as diabetes, cardiovascular disease, neurodegenerative disorders, and chronic inflammatory conditions. It also emphasized the development of sustainable sourcing practices, advanced extraction technologies, and novel delivery systems that enhance the therapeutic potential of these natural compounds while preserving biodiversity.

By fostering interdisciplinary collaboration among scientists, educators, healthcare providers, and industry stakeholders, the conference accelerated the translation of laboratory discoveries into clinically validated interventions that can meaningfully improve patient outcomes while reducing the ecological footprint of healthcare. Attendees explored nature's pharmacy and forged innovative pathways toward more holistic, accessible, and sustainable approaches to chronic disease management.
